

Statement of Deficiencies	(X1) Provider/Supplier/CLIA Identification Number 49D0918172	(X3) Date Survey Completed 08/20/2024
Name of Provider or Supplier Pariser Dermatology Specialists, Ltd	Street Address, City, State 207 Bulifants Blvd - Suite C, Williamsburg, VA	
For information on the provider's plan to correct this deficiency, please contact the provider or the state survey agency.		

(X4) ID Prefix Tag	Summary Statement of Deficiencies
D0000	An announced CLIA Recertification survey was conducted at Pariser Dermatology Specialists, LTD on 08/20/24 by the Virginia Department of Health's Office of Licensure and Certification. The laboratory was surveyed under 42 CFR part 493 CLIA Requirements. Specific deficiencies cited are as follows:
D5203	<p>SPECIMEN IDENTIFICATION AND INTEGRITY CFR(s): 493.1232</p> <p>The laboratory must establish and follow written policies and procedures that ensure positive identification and optimum integrity of a patient's specimen from the time of collection or receipt of the specimen through completion of testing and reporting of results.</p> <p>This STANDARD is not met as evidenced by: Based on the review of policy and procedures (P&P), patient histology slides, Mohs surgery maps and interviews, the lab failed to follow the established P&P for patient labeling of Mohs histopathology tissue slides for one of eight random samples selected for review at the date of survey on 08/20/24. Findings include: 1. Review of P&P "Labeling/Accessioning of Slides and MMS Maps" revealed the following statement: "Slides are to be labeled "A" for the first slide, "B" for the second slide, "C" on the third slide, etc. for each additional slide. The first section is placed on the outermost edge of the slide furthest from the frosted edge. As additional sections are taken, they are placed adjacent until reaching the frosted end of the slide." 2. Review of eight random tissue slides and corresponding Mohs surgery maps revealed a discrepancy for Case number WB24-547 on 04/22/24 between the Mohs map and the patients' histology slide for "Stage III section 5 and 6". The Mohs map showed Stage III sections 5 and 6 as written written by the Mohs surgeon. The two corresponding patient slides for that stage was marked as II 3, 4 5 and II 3, 4 A. In an interview with the histotechnologist on 08/20/24 at approximately 1500, they confirmed that the slides were not labeled as written on the Mohs map for Stage III sectioning. 3. An exit</p>

interview with the operations manager and the histotechnologist on 08/20/24 at 1530 confirmed the findings.
