<b>(X4) ID Prefix Tag</b>	<b>Summary Statement of Deficiencies</b>
<b>D0000</b>	An announced CLIA Recertification survey was conducted at the Forefront Dermatology (Hardy) on 09/23/22 by the Virginia Department of Health's Office of Licensure and Certification. The laboratory was surveyed under 42 CFR part 493 CLIA Requirements. Specific deficiencies cited are as follows:
<b>D5203</b>	<p><b>SPECIMEN IDENTIFICATION AND INTEGRITY</b> CFR(s): 493.1232</p> <p>The laboratory must establish and follow written policies and procedures that ensure positive identification and optimum integrity of a patient's specimen from the time of collection or receipt of the specimen through completion of testing and reporting of results.</p> <p>This STANDARD is not met as evidenced by: Based on the review of policy and procedures (P&amp;P), patient histology slides and Mohs surgery maps, and an interview with the lab director and primary testing personnel, the lab failed to follow the established P&amp;P for patient labeling of Mohs histopathology tissue slides for one (1) of 3 random samples selected for review. Findings include: 1. Review of P&amp;P "Slide Labeling" revealed the following instructions: "Slides are to bel labeled with mohs log accession number, patient last name, number of stages will be marked with Roman numeral; stage I, II, III,etc." 2. Review of 3 random tissue cases, to include slides and corresponding Mohs surgery maps, revealed that the last name of Patient A (21-0027) was misspelled on Slide I A and B (date of test 07/14/21). 3. An interview with the lab director and primary testing personnel on 09/23/22 at approximately 10:20 AM confirmed the findings.</p>
